1. Introduction

QrSortable helps you organize belongings using QR code storage labels. Attach a label to each box, scan it with your phone, and build a searchable inventory with item names, remarks, and photos. Later, search across all boxes to locate items instantly.

NOTE: Some screens and button names may vary slightly depending on device (Android/iOS) and app version.

Quick Start (Less than 1 minute)

1. Install QrSortable from Google Play or the Apple App Store.
2. Tap Generator to generate/print codes or purchase label packs.
3. Scan a QrSortable label and save box Location + Category.
4. Tap + to add items, remarks, and up to 4 photos ($\leq \sim 1$ MB each).
5. Use Search to find items instantly across all boxes.

2. Product Overview

QrSortable links a physical label (QR code or barcode) to a digital box record. Each record stores the box location, category, and the list of items inside.

QrSortable is a QR inventory system that links a physical label (QR code or barcode) to a digital “box record”. Each box record stores the box location, category, and the list of items inside.

2.1 Recommended setup approach

- Start with 5–10 boxes to learn the workflow.
- Use clear naming conventions (e.g., “Kitchen—Pans”, “Docs—Tax 2024”).
- Add at least one photo for important/valuable items.
- Use remarks for critical details (serial number, fragile, keep dry).

3. Features & Functions

- QR Code Storage Labels (generate/print or buy packs)
- Scan & Catalog items (name, remark, photos)
- Smart Search across your inventory
- Generate A4 QR/Barcode PDFs
- Order products (in-app or website)
- Multi-User Sharing (premium)
- Moving Mode (move items between boxes)

- Multi-language UI (English, German, Spanish, French)

4. Safety, Privacy & Handling

4.1 Label handling (best results)

For reliable scanning and label durability:

- Apply labels to clean, dry, flat surfaces.
- Avoid corners or folds (codes can distort).
- Use good lighting when scanning; reduce glare from plastic covers.
- If a label is damaged, replace it and update your box record.

4.2 Privacy & Data Sharing

QrSortable can be used without creating an account. If you enable Multi-User Sharing (premium), your data is synchronized to a backend service and shared with other devices using a MultiuserID.

WARNING: Only share your MultiuserID with people you trust. Anyone with the ID may be able to sync your inventory.

5. Installation & Setup

5.1 System Requirements

Android: 7.0 (API level 24) or later. iOS: 14.0 or later.

5.2 Install the app

Android (Google Play Store):

1. Open Google Play Store
2. Search for “QrSortable”
3. Tap Install
4. Open the app

iOS (Apple App Store):

5. Open App Store
6. Search for “QrSortable”
7. Tap Get
8. Open the app

5.3 First Launch

On first launch, select your preferred language. A guidance pop-up explains the basic workflow. You can review help information later from the Menu.

6. Step-by-Step Usage

6.1 Create Your First Box

A “box” is a digital record linked to a physical label attached to your container.

9. Tap the Generator icon to generate QR/barcodes digitally (A4 PDF) or to order physical labels.
10. Tap Scan and scan the QR label on your box.
11. Enter box details: Location (where it is stored) and Category (what type of items).
12. Tap the + (Add Item) icon to add items to the box.

NOTE: QrSortable is designed to scan QrSortable-generated or purchased labels for best reliability and security.

Figure 4. Scan Icon

Figure 5. Scan label and open box details

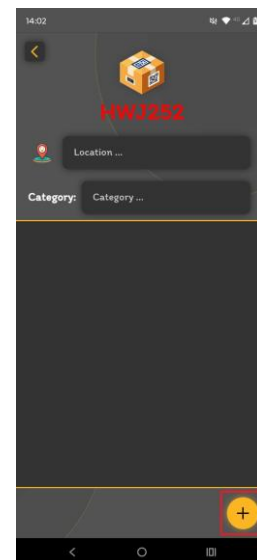

Figure 6. Box details: location and category

6.2 Add Items (with Photos)

Add items so you can search for them later. Use clear item names and helpful remarks.

13. Enter Item name and Remark. Example remark: "Fragile—glass".
14. Add up to 4 photos (recommended ≤ 1 MB each) by tapping the image (+) button.
15. Tap Save to store the item in the selected box.

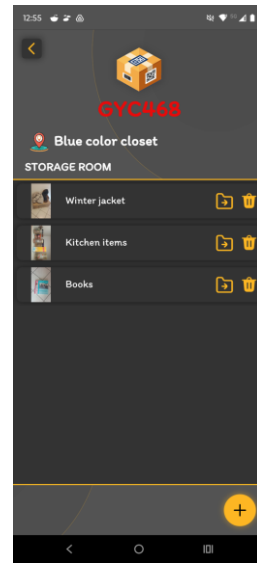

Figure 8. Saved item list in a box

6.3 Find Items (Search) & Menu

Search works across item names, remarks, box locations, and categories.

16. Type a keyword in Search.
17. Tap the arrow/search button.
18. Open a result to view item details and box location.

Use the Menu to access Orders, Multi-User, and other features.

7. Core Features

7.1 Generate A4 QR/Barcode Sheets (PDF)

Generate a printable A4 PDF with QR codes or barcodes if you want to print labels yourself.

19. Home → Generator → select "Generate A4 QR or bar codes yourself!"
20. Choose QR code or barcode and configure quantity/layout.
21. Provide required details if requested (e.g., billing/shipping fields).
22. Complete payment (required).
23. Download/share the PDF when prompted.
24. Re-download later: Menu → Orders → Download.

Figure 17. Orders list with download option

7.2 Order Physical Label Packs (App & Website)

Order durable label packs from the app or from <https://www.qrsortable.com/>.

In the app:

25. Home → Generator → select a label pack.
26. Tap Buy Now and complete checkout.
27. You will receive confirmation and shipping updates.

7.3 Multi-User Sharing (Premium)

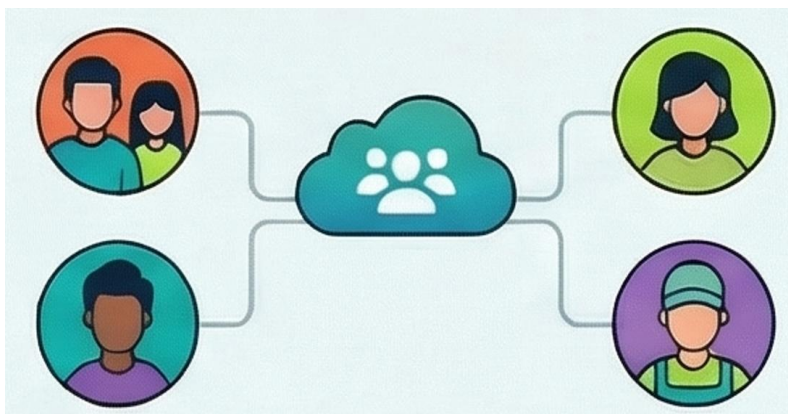

Figure 22. Multi-User Sharing entry page

Multi-User Sharing lets multiple devices access the same inventory—ideal for families or teams.

How it works

- One device syncs inventory data to the backend.
- Other devices join using the same MultiuserID.
- After syncing, all devices can view and update the shared inventory.

To enable and sync:

31. Menu → Multiuser. Subscribe if prompted (enter email, select currency, complete payment).
32. Scan and save at least one box so there is data to sync.
33. Tap Refresh/Sync (visible when Multi-User is enabled) to upload your inventory.
34. On another device: install QrSortable → Menu → Multiuser → enter the MultiuserID (include hyphens "-").
35. Confirm the sync prompt. If results are missing, restart the app and sync again.

TIP: If a second device does not show updates, restart QrSortable and tap Refresh/Sync again.

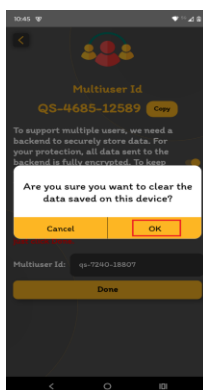

Figure 31. Sync confirmation

7.4 Moving Mode (Move Items Between Boxes)

Move items between boxes without re-typing. This is useful during moving or reorganization.

36. Open the source box.
37. Tap the Move icon for the item.
38. Select the destination box.
39. Confirm to move the item.

To permanently remove an item, tap the Delete icon for that item.

8. Troubleshooting

8.1 QR code will not scan

- Clean the camera lens and label surface.
- Use brighter light and avoid reflections.
- Hold the phone steady about 10–20 cm away.
- Confirm the label is a QrSortable label.

8.2 Cannot download generated PDF

- Check your internet connection.
- Open Menu → Orders and try Download again.
- Confirm payment completed successfully (required).

8.3 Photos will not be uploaded

- Check app permissions for Camera/Photos.
- Ensure free storage space is available.
- Try smaller photos (≤ 1 MB) and fewer images (max 4).

8.4 Multi-User sharing does not sync

- Verify premium subscription is active.
- Tap Refresh/Sync on the primary device.
- Re-check MultiuserID (including hyphens).
- Restart the app on both devices.

9. FAQs

Do I need an account?

No. QrSortable works without login. Premium is required only for Multi-User Sharing.

How many photos can I add per item?

Up to 4 photos. For best performance, keep each photo about 1 MB or less.

Where can I download my A4 PDF again?

Menu → Orders → Download.

Can I scan any QR code?

QrSortable is designed for QrSortable-generated or purchased labels for reliability and security.

How should I name boxes for best search?

Use consistent names: Location + Category (e.g., “Basement—Tools”, “Bedroom—Winter”).

10. Maintenance & Support

10.1 Keep the app updated

Install updates from Google Play or the App Store to get improvements and fixes.

10.2 Label maintenance

Replace damaged labels to maintain scan reliability. You may protect labels with transparent tape (do not cover the code).
